

My propositions for the questions:

1) Created tidal ferries on all the beaches.

If someone finds trash on the beach, they put it in (example: one every one hundred meters).

Sail with an electric boat equipped with a net that would collect plastic waste (example: one week end per month).

2) Created an application like nutriscore (compare the value of the ingredients of a product buy).

3) In Belgium, in the canteen, we have sorting bins for waste (plastics, food, waste,...)

Simon from Belgium.

---

My answer propositions for questions:

1) New technology that allows a rubbish bin to float in the water and waves to carry floating garbage inside it because the edge of the bin is flush with the water, the garbage travels there and the water exits through filter on the bottom. For example: city of Turku have a Sea Bin- trash collector used in the river at marina.

2) When you order food from an online store, the online store could indicate how much, for example, the food meets your nutrition reference. Example: how much of your daily kcal consumption is filled with food you buy.

3) At our school, we don't get much information about sustainable development. Our school talk about sustainable development but I don't think much is being done about it. However some of our teachers are saving materials by doing assignments electronically instead of paper.

Julius from Finland.

---

Here are my answers to the questions asked:

1) For example, we could create aquatic robots that pick up waste from the bottom of the water.

2) In my school we have a day when we eat a vegetarian dish, a day when there is fish or meat and sometimes we eat a typical dishes from a certain country.

3) For example in my school we have paper recycling boxes in each classroom, in the canteen we have different bins for each type of waste, in the college hall a large box where we throw used pencils, empty glue etc...

Malena from France.

---

My answer propositions for questions:

- 1) I would propose to use the waste to create something and use it as an ornament
- 2) Absolutely yes, in the corridor of the school there is also a food pita kind so I think it includes all the classes
- 3) In our class, we talked about this topic we draw posters on balanced diet
